

## 0.4 What Motion is that?

### Grouping types of motion

We have looked at four types of motion:

1. Cars on wheels to **go straight**
2. Pendulums that **go to and fro**
3. Seesaws and Bungy jumpers that **go up and down**
4. Spinning tops that **go around**.

In the table below find some moving things and classify what kind of motion it belongs to.

(Teacher could put this as a chart on the wall)

Going Straight	To and Fro	Up and Down	Going around
